General

Application

PVRE, PVRET and Prof joysticks from Danfoss are generally used together with PVGs and PVEs, but can be used in any application. A complete range of joysticks from the simple PVRE handle with X-Y functions to the Prof 1 ergonomic handle with rollers and pushbuttons are available.

Mechanical Design

All handle variants share the same mechanical base to which the electronics are mounted. The mounting flange of the joystick is an integrated part of the mechanical base, which also contains a linkage that transfers handle movement to the electronics. The linkage also includes neutral positioning springs.

The neutral positioning springs are designed to ensure a smooth return of the handle into neutral position. The maximum spring force is optimised to be just strong enough to keep the handle in position, even during operation in rough terrain, without interfering with the operation of the joystick or impairing it's ergonomic characteristics.

Spring force	8-10 N
' -	

Main Function Module

(Prop1 and Prop2)

The primary functions of the joystick are defined as its X and Y directions.

Main functions are potentiometers with integrated direction switches.

Each function has a working angle of ±18°.

Signal range	Neutral signal			
25% – 75%	50%			
of supply voltage				

When moving the handle diagonally the maximum signal range is not available.

Connector

All joysticks come with a common 25 pin male SUB-D connector with M3 screws. (MIL - DTL - 24308)

General

Direction Switches

Proportional modules have integrated direction switches. One switch is activated when the module is moved in the A direction, the other is activated when the module is moved in the B direction.

The direction switches are used to activate the neutral position switch, and with some electronic modules the direction switch outputs are available in the connector. (See details about electronics.)

There is a dead band in the joystick of approximately 1.5° before the direction switches are activated.

The direction switches are independant from the signal voltage

Neutral Position Switch

The neutral position switch can supply up to 3 PVEs or other devices (see electrical details), and functions as both a power save and a safety switch.

The switch is only activated when one or more of the proportional modules are activated.

The operation of the neutral position switch is dependant on signals from the direction switches.

Danfoss recommends that the neutral position switch be used to the greatest possible extent.

When using the neutral position switch all three UDC wires as well as all three Neutral Switch wires must be connected.

Cables

For compatibility with different applications, a selection of mating cables are available:

Code no. 162B	Length mm [in]	Plug type	Туре
6013	4000 [157]	Leads	Vertical SUB-D
6014	4000 [157]	Leads	Horizontal Sub-D
6015	500 [19]	Clipper	-
6016	230 [9]	TrimTrio	-
6017	230 [9]	Tabs	PVRE compatibility

General

Prof Joysticks

The Prof family of joysticks is built around a series of modules that can be combined in various ways to create the joystick that best fits the application.

Each joystick has a base module with proportional functions (X & Y); a colour band for decoration and identity, a handle, and depending on handle selection, a number of pushbuttons and/or proportional functions.

Handle / Top functions

To provide optimum user comfort, a selection of handles is available. Each handle offers a choice of push buttons and / or proportional functions positioned for ease of use and comfort.

Base module

A number of electronic modules provide various performance levels to cater for different needs in different applications.

Prof Joysticks

Cable

For easy integration into existing applications cables with different connectors are available as accessories, see page 5.

A professional handle for intensive operation; with a forward-leaning, curved, ergonomic shape. The leather-like grained surface allows the palm of the hand to breathe during operation.

The Prof 1 handle can be fitted with up to seven push buttons, or up to two proportional functions with up to five push buttons.

For location and combination of function modules see the overview.

Color Band

A choice of colors is available for the band at the base of the handle.

Colors	
Yellow	
Black	
Red	

Proportional Modules

The roller function module is a spring centred potentiometer with integrated direction switches.

Working angle: ±42°

Direction switch angle: 3.5 ±2°

Signal range	Neutral signal
25% – 75%	50%
of supply voltage	

Push Buttons

The handle can be fitted with up to seven independent On/Off functions.

The buttons are protected against shocks and unintentional activation by a high collar.

Location and Orientation of Modules

Electronic Modules

The electronic modules are available with four different performance levels: Basic, Standard, Extended, and CAN-enabled.

Basic

The Basic level module is a connection platform that contains no electronics. This version offers raw signals from function modules, proportional modules, and push buttons.

The Basic level module contains no kind of protection, amplification, neutral switches, relays, or filtering and meets no legal specifications.

The proportional functions in the basic module are configured like this:

The value of P is 5 K Ω , R1 and R2 are 1.125 K Ω (See technical data for tolerances).

This configuration ensures that the output signal will be at least 25%-75% of the supply voltage.

Because of the output impedance of the sensors, it is recommended to use an amplifier if the application draws more than 15 μ A.

Standard

The Standard level electronic module provides amplifiers, inverting and signal relays on all proportional outputs, and an electronic switch on all On/Off outputs.

The signal relays are controlled by the power supply in such a way that a power failure will disconnect the output. (This will automatically send a Danfoss proportional valve to neutral position)

When used together with a Danfoss proportional valve signal inversion causes the joystick to move the spool in the direction opposite to the default. This is equivalent to swapping the hoses on the valve outlets.

The directional switches are not affected by the signal inversion.

Danfoss

Prof 1

Factory setting: Non-inverted

Extended

The Extended level electronic module has the same configuration as the Standard level module. Additionally it has adjustable proportional functions. The Extended level module offers the option of individual signal adaptation (flow adjustment) and common dead-band compensation.

The dead band compensation (D.B.c.) ensures that the dead band of the valve is reduced to a minimum movement of the grip.

The dead band compensation is only active outside the neutral range, which ensures normal amplification within the neutral position range.

The dead band compensation is set for all four proportional functions on one potentiometer.

For each proportional function there are two integrated potentiometers that independently control the gain for the A and B directions of the signal output without limiting the movement range of the handle (adjustable flow range).

The gain of each function can be adjusted from 0.25 to 2.00. This has no effect within the D.B.c. range.

Location of potentiometers for adjusting D.B.c and gain:

Factory setting @ 12 V				
Dead band compensation	0.42 V			
Signal gain	0.86			

CAN-enabled

There is a CAN-enabled electronic module available for the Prof family of joysticks. The module provides a standard CANOpen interface. For further information read Danfoss Technote on CAN bus components and see our webpage:

http://www.Danfoss.com

Prof1 dimensions

Examples of Use

Signal leads must not also function as supply leads unless the distance between PVE and terminal board is less than 3 m [120 in] and the lead cross-section is \geq 0.75 mm² [AWG 18].

E: Emergency stop

: Signal leads

: Supply leads

Basic version used with controller

When using the Basic level module with a controller, it is recommend to use a filter similar to the one in the figure below to ensure a symmetric and limited load on the proportional sensors.

There are no electronics built in to the Basic level module

Standard program

The joystick variants offer a wide range of different combination possibilities. This may result in several code numbers with identical functions (such as location of push button and choice of color).

Based on experience we have therefore put together a standard program.

The standard program of joysticks is available in the following variants:

- 4-way mechanical
- Yellow push buttons with flat collar
- Red color bands
- Standard electronics (excluding basic and extended with flow and dead band compensation).

Prop number	ON/OFF number	Code numbers Left hand			Code numbers Right hand
2	0	162F1116	162B98.10	162B98.10	162F1100

Prof 1 Joystick Specification

Prof 1 Joystick Specification - Customer specification

Code no:					
Customer:					
Application:					
Subsidiary/Dealer:					
1. Grip					
2. Front plate					
3. Top functions	Position (push button color)	Position (roller)			
	3A:	3:			
	3B:				
	4A:	4:			
	4B:				
	5:				
	6:				
	7:1)				
4. Colour band	'				
5. Main function module	Set-up				
	Inverted ²⁾ (check mark = Inverted)	Flow reduction and dead-band compensation ³⁾ (check mark = ON)			
	Prop. 1 Prop. 2 Prop. 3 Prop. 4	Prop. 1 Prop. 2 Prop. 3 Prop. 4			
6. Cable					
Compiled by: Date:	Checked by: Date:				
1) Only for deadman button					

²⁾ Only for standard and extended level options. Factory setting is "non-inverted" if nothing else is mentioned

³⁾ Only for extended level option. Factory setting is "on" if nothing else is mentioned.

The PVRE series 2 is the successor to the popular PVRE joystick. This joystick builds on the known technology from the Prof family of joysticks as well as the well known handles from the PVRE series 1 joysticks.

Versions

The PVRE handle is available in three different variants: No top function, with prop 3, and with two On/Off functions (rocker switches).

Code no. 162F	1310 (1300)	1311 (1301)	1312 (1302)	1313 (1303)	1314 (1304)	
Symbol	155860.10	155B62.10	155B64.10	155B63.10	155B147.10	
Prop1	Х	Х	Х	X	Х	
Prop 2	Х	Х	-	-	Х	
Prop 3	-	-	-	-	Х	
On/Off	Х	-	Х	-	-	
() Incl. PVRE series 1) Incl. PVRE series 1 adapter ring for mounting in place of a PVRE Series 1					

Location and Orientation of Functions

It is possible to turn the PVRE handle through 180° to make the direction of movement fit the application.

Connections

PVRE/T version connections

P200181

Numbers in [] indicate pin number in sub-D connector.

Technical Data

		Below flange	IP 21
		Above flange	IP 65
		With On/Off	IP 42
		With Prop 3	IP 65
Ambient temperature			-30 - +60° [-22 - +140°F]
Supply voltages		U _{DC}	10-30 V
		Max ripple	5%
Current consumption			≈150 mA
Signal voltage U _s		Min → Max	0.25 → 0.75
	U _{DC}	Neutral position	0.50

Signal load in neutral position		Load type	PVE	Other
		Load impedance	>6 kΩ	>15 kΩ
Signal current at max movement			$U_s - 0.5 \times U_{DC}$ 6 k Ω	U _s 15 kΩ
		@ U _{DC} = 12 V	±0.6 mA	0.2 → 0.6 mA
		@ U _{DC} = 24 V	±1.2 mA	0.4 → 1.2 mA
Signal current in neutral position		@ U _{DC} = 12 V	±0 mA	0.4 mA
		@ U _{DC} = 24 V	±0 mA	0.8 mA
On/Off switch		Max load	0.6 A	
Neutral position switch		Max load	3 A

Products we offer:

- DCV directional control valves
- Electric converters
- Electric machines
- Electric motors
- · Hydrostatic motors
- Hydrostatic pumps
- Orbital motors
- PLUS+1[®] controllers
- PLUS+1® displays
- PLUS+1° joysticks and pedals
- PLUS+1® operator interfaces
- PLUS+1* sensors
- PLUS+1® software
- PLUS+1® software services, support and training
- Position controls and sensors
- PVG proportional valves
- Steering components and systems
- Telematics

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electric components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market as well as the marine sector. Building on our extensive applications expertise, we work closely with you to ensure exceptional performance for a broad range of applications. We help you and other customers around the world speed up system development, reduce costs and bring vehicles and vessels to market faster.

Danfoss Power Solutions – your strongest partner in mobile hydraulics and mobile electrification.

Go to www.danfoss.com for further product information.

We offer you expert worldwide support for ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide you with comprehensive global service for all of our components.
